(54) Title: A METHOD AND A SYSTEM FOR PROVIDING A CERTAIN QUALITY OF SERVICE TO A MOBILE STATION IN A MOBILE COMMUNICATION SYSTEM

(57) Abstract: The invention bears upon a method and a system for providing a certain quality of service to a user-device within a mobile telecommunication system. Said telecommunication system comprises one or several user-registers linked to a user-device, and one or several priority-tables associated with an area covered by the telecommunication system. A user-register is compared with a priority-table, when a user-device linked to said user register enters the area associated with said priority-table. The user-device can then be provided with a certain quality of service, depending on a possible correspondence between said user-register and said priority-table.
